

# OpenMC Workshop

## Depletion Briefer

ANS Student Conference

April 13, 2023

# Depletion

- What happens when you turn the reactor on? Atoms split; short-lived products decay.
- We calculate  $k$  over time producing power
- Lets us know nuclide inventories, can calculate critical boron concentration, etc.

# Depletion

$$\begin{aligned} \frac{dN_i(t)}{dt} = & \sum_j \left[ \underbrace{f_{j \rightarrow i} \int_0^\infty dE \sigma_j(E, t) \phi(E, t)}_{\text{nuclear reactions}} + \underbrace{\lambda_{j \rightarrow i}}_{\text{decay}} \right] N_j(t) \\ & \underbrace{\hspace{10em}}_{\text{Production of nuclide } i \text{ from nuclide } j} \\ & - \left[ \underbrace{\int_0^\infty dE \sigma_i(E, t) \phi(E, t)}_{\text{nuclear reactions}} + \underbrace{\sum_j \lambda_{i \rightarrow j}}_{\text{decay}} \right] N_i(t) \\ & \underbrace{\hspace{10em}}_{\text{Loss of nuclide } i} \end{aligned}$$

OpenMC calculates the integrals involving flux!

# Depletion

$$\begin{aligned} \frac{dN_i(t)}{dt} = & \sum_j \left[ \underbrace{f_{j \rightarrow i} \int_0^\infty dE \sigma_j(E, t) \phi(E, t)}_{\text{nuclear reactions}} + \underbrace{\lambda_{j \rightarrow i}}_{\text{decay}} \right] N_j(t) \\ & \underbrace{\hspace{10em}}_{\text{Production of nuclide } i \text{ from nuclide } j} \\ & - \left[ \underbrace{\int_0^\infty dE \sigma_i(E, t) \phi(E, t)}_{\text{nuclear reactions}} + \underbrace{\sum_j \lambda_{i \rightarrow j}}_{\text{decay}} \right] N_i(t) \\ & \underbrace{\hspace{10em}}_{\text{Loss of nuclide } i} \end{aligned}$$

OpenMC calculates the integrals involving flux!

# Depletion as a system of ODEs

$$\frac{d\mathbf{n}}{dt} = \mathbf{A}(\mathbf{n}, t)\mathbf{n}, \quad \mathbf{n}(0) = \mathbf{n}_0$$

where

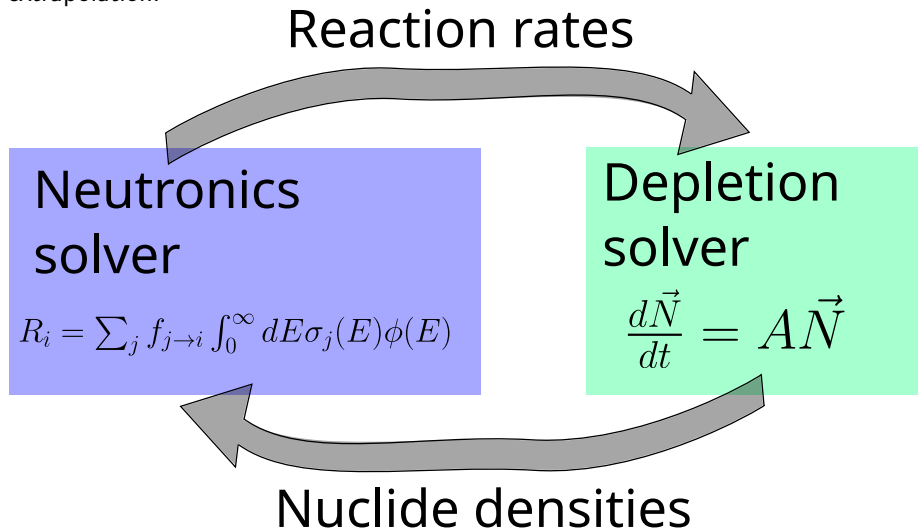

$$\mathbf{n} = \begin{pmatrix} N_1 \\ N_2 \\ \vdots \\ N_n \end{pmatrix}, \quad \mathbf{n}_0 = \begin{pmatrix} N_{1,0} \\ N_{2,0} \\ \vdots \\ N_{n,0} \end{pmatrix}$$

Since transport solution only depends on time on via  $\mathbf{n}$ , we can write

$$\frac{d\mathbf{n}}{dt} = \mathbf{A}(\mathbf{n})\mathbf{n}$$

## Predictor method

The simplest integration method is known as the “predictor” method or constant extrapolation.

## Further information

- OpenMC gives you a [wide choice of integrators](#) with tradeoffs in accuracy, computational cost, and memory requirements
- For more information on the theoretical background of depletion and comparisons of OpenMC with Serpent, see the journal paper by [Romano et al.](#)
